Ecology of Hierarchical Landscapes Oct 02 2020 The idea for this book grew out of: (1) the realisation that development of the theory of landscape ecology has now reached the point where rigorous field work is required to validate models, test assumptions and ideas of scaling theory, and refine our understanding of landscape features and their delineation; (2) the relative scarcity of compilations that have examined the role of field research or interdisciplinary management applications in advancing the science of landscape ecology; and (3) the increasing amount of information coming out of the Chequamegon Integrated Field Project (CIFP) on relevant topics. This book synthesises the experiences and lessons learned from the CIFP project and other relevant landscape studies in an attempt to demonstrate the utility of field studies and emerging technology to the advancement of the science. This book is organised to synthesise and update knowledge on research topics mentioned previously, with an emphasis on ecological consequences (i.e., implications for ecological function) of the approach to and understanding of these topics across levels of the ecological hierarchy.

No One Gardens Alone Dec 04 2020 No One Gardens Alone tells for the first time the story of Elizabeth Lawrence (1904-1985). Like classic biographies of Emily Dickinson and Edna St. Vincent Millay, this fascinating book reveals Lawrence in all her complexity and establishes her, at last, as one of the premier gardeners and gardening writers of the twentieth century. "In this first biography of the renowned gardening writer Elizabeth Lawrence, Emily Herring Wilson reminds us that even quiet lives hold unsuspected passions. Written with graceful clarity, sensitivity, and empathy, this life is a perennial."--Linda H. Davis, author of *Onward and Upward: A Biography of Katharine S. White* Elizabeth Lawrence (1904-1985) lived a singular, often contradictory life. She was a traditional southerner; a successful, independent garden writer with her own newspaper column and numerous books to her credit; a dutiful daughter who cared for her elders and lived with her mother; a landscape architect; a passionate poet; a friend of literary figures like Eudora Welty and Joseph Mitchell; and a very private woman whose recently discovered letters illuminate aspects of her mystery. Lawrence earned many fans during her lifetime and gained even more after her death with the reissue of many of her classic books. When Emily Herring Wilson edited a collection of letters between Lawrence and famed New Yorker editor Katharine S. White in *Two Gardeners*, she found legions of readers who were eager to know more about the legendary Lawrence. Now, one hundred years after her birth, *No One Gardens Alone* tells for the first time the story of this fascinating woman. Like classic biographies of literary figures such as Emily Dickinson and Edna St. Vincent Millay, this book reveals Lawrence in all her complexity and establishes her, at last, as one of the premier gardeners and garden writers of the twentieth century.

The Design Dimension of Planning Aug 20 2019 This book examines the design policies in current development plans. With design quality of growing importance to the public, consumers, developers and their clients, and high on the Secretary of State's agenda, this book makes an important practical contribution to improving design control. With the increasing importance attached to district-wide development plan policies since 1991, local planning authorities and community groups have an important opportunity to improve their control over the built environment. This research text explains how clear, comprehensive and effective policies can be researched, written and implemented.

European Landscape Convention Nov 15 2021 As a reflection of European identity and diversity, the landscape is our living natural and cultural heritage... Within the meaning of the European Landscape Convention the close links between the notion of landscape and human rights, democracy and sustainable development deserve to be highlighted. Recommendation CM/Rec(2017)7 of the Committee of Ministers of the Council of Europe to member states on the contribution of the European Landscape Convention to the exercise of human rights and democracy with a view to sustainable development, emphasises the need to "consider the importance that quality and diversity of landscapes has for the minds and bodies of human beings, as well as for societies". The forthcoming opening of the convention to non-European states provides a unique opportunity to reaffirm the universal nature of human rights. The implementation of the convention represents an effective contribution by the Council of Europe to realisation of the 2030 Agenda for Sustainable Development, as adopted by the United Nations General Assembly.

Neolithic of Mainland Scotland Feb 06 2021 Archaeologists show us how the Neolithic human lived in mainland Scotland What was life like in Scotland between 4000 and 2000BC? Where were people living? How did they treat their dead? Why did they spend so much time building extravagant ritual monuments? What was special about the relationship people had with trees and holes in the ground? What can we say about how people lived in the Neolithic and early Bronze Age of mainland Scotland where much of the evidence we have lies beneath the ploughsoil, or survives as slumped banks and ditches, or ruinous megaliths? Each contribution to this volume presents fresh research and radical new interpretations of the pits, postholes, ditches, rubbish dumps, human remains and broken potsherds left behind by our Neolithic forebears. From the APF What was life like in Scotland between 4000 and 2000BC? Where were people living? How did they treat their dead? Why did they spend so much time building extravagant ritual monuments? What was special about the relationship people had with trees? Why was so much time and effort spent digging holes and filling them back up again? What can we say about how people lived in the Neolithic and early Bronze Age of mainland Scotland where much of the evidence we have lies beneath the plough soil, or survives as slumped banks and filled ditches, or ruinous megaliths? This book will draw together leading experts and young researchers to present fresh research and outline radical new interpretations of the pits, postholes, ditches, rubbish dumps, human remains and broken potsherds left behind by our Neolithic forebears. Much of this evidence has come to light

in the past few decades, putting the emphasis very much lowland, mainland Scotland as opposed to more famous Orcadian Neolithic sites. Inspired by the work of Gordon Barclay, the leading scholars of Scotland's Neolithic in the last 40 years, the chapters in this book offer a wide-ranging analysis of the evidence we have for the first farmers in Scotland.

Geology and Landscapes of the Eastern Pyrenees Dec 24 2019 This book provides a synthesis of the physiography and geodynamics of the entire Pyrenean orogen and its foreland basins, providing the "big picture" (structure of the orogen and chronology of its formation, overview of its post-orogenic evolution, and Quaternary and recent landscape history). One part of the book proposes a 6–7 day itinerary across the eastern and east-central Pyrenees, two areas that currently provide the richest, best-documented, and most carefully curated database on the post-orogenic evolution of the mountain belt. The book deals with three complementary topics: (i) geodynamics, i.e. the long-term post-orogenic evolution of the Pyrenees since the declining stages of tectonic collision ca. 30 million years ago, and within the wider reference frame of Iberia, the Western Mediterranean, and the Atlantic margin; (ii) geomorphological processes and landforms that have conspired to shape the eastern part of the French and Spanish Pyrenees in response to base-level and climate-related changes over the same time period; (iii) geoheritage, i.e. educational vignettes of the flagship landscape units and typical geological sections of the study area. Written as a field guide, it is designed to help readers to construct discovery-based itineraries through the region (with options and variants depending on time and physical ability), allowing them to appreciate the key landscape and geoheritage features over the course of 1 week, with potential for much more. This GeoGuide is primarily aimed at confirmed geoscientists from most disciplines in Earth science, at postgraduate students engaged in field studies, and at curiosity-driven, educated amateurs keen to enhance their understanding of spectacular or enigmatic features encountered on their travels.

Mainstreaming Landscape through the European Landscape Convention Sep 25 2022 The European Landscape Convention has introduced a Europe-wide concept of protection, management and planning of all landscapes – not just the outstanding ones. This book reflects on the background to the establishment of the convention, takes a critical look at examples and experiences of its implementation, and discusses future developments for the convention and the management of landscapes in Europe. A decade after the creation of the European Landscape Convention, this book asks how it has influenced the governance and development of European landscapes, and what role it will play in the coming years. The authors provide a wide range of analyses, reflections and visions, informed by their diverse experiences of researching, working with and using the convention. The sixteen essays are organised into three sections, focusing on the fundamental concepts and values behind the convention, current projects and experiences of implementation, and prospects for future developments.

Architectural Research Addressing Societal Challenges Apr 27 2020 The escalating interdependency of nations drives global geopolitics to shift ever more quickly. Societies seem unable to control any change that affects their cities, whether positively or negatively. Challenges are global, but solutions need to be implemented locally. How can architectural research contribute to the future of our changing society? How has it contributed in the past? The theme of the 10th EAAE/ARCC International Conference, "Architectural Research Addressing Societal Challenges", was set to address these questions. This book, Architectural Research Addressing Societal Challenges, includes reviewed papers presented in June 2016, at the 10th EAAE/ARCC International Conference, which was held at the facilities of the Faculty of Architecture of the University of Lisbon. The papers have been further divided into the following five sub-themes: a Changing Society; In Transit – Global Migration; Renaturalization of the City; Emerging Fields of Architectural Practice; and Research on Architectural Education. The EAAE/ARCC International Conference, held under the aegis of the EAAE and of the ARCC, is a conference organized every other year, in collaboration with one of the member schools/ universities of those associations, alternatively in North America or in Europe.

Applied Computer Science for GGOS Observatories Nov 22 2019 This book combines elementary theory from computer science with real-world challenges in global geodetic observation, based on examples from the Geodetic Observatory Wettzell, Germany. It starts with a step-by-step introduction to developing stable and safe scientific software to run successful software projects. The use of software toolboxes is another essential aspect that leads to the application of generative programming. An example is a generative network middleware that simplifies communication. One of the book's main focuses is on explaining a potential strategy involving autonomous production cells for space geodetic techniques. The complete software design of a satellite laser ranging system is taken as an example. Such automated systems are then combined for global interaction using secure communication tunnels for remote access. The network of radio telescopes is used as a reference. Combined observatories form coordinated multi-agent systems and offer solutions for operational aspects of the Global Geodetic Observing System (GGOS) with regard to "Industry 4.0".

History of Landscape Ecology in the United States Mar 19 2022 This book describes the emergence of landscape ecology, its current status as a new integrative science, and how distinguished scholars in the field of landscape ecology view the future regarding new challenges and career opportunities. Over the past thirty years, landscape ecology has utilized development in technology and methodology (e.g., satellites, GIS, and systems technologists) to monitor large temporal-spatial scale events and

phenomena. These events include changes in vegetative cover and composition due to both natural disturbance and human cause—changes that have academic, economic, political, and social manifestations. There is little doubt, due to the temporal-spatial scale of this integrative science, that scholars in fields of study ranging from anthropology to urban ecology will desire to compare their fields with landscape ecology during this intellectually and technologically fertile time. History of Landscape Ecology in the United States brings to light the vital role that landscape ecologists will play in the future as the human population continues to increase and fragment the natural environment. Landscape ecology is known as a synthesized intersection of disciplines; but new theories, concepts, and principles have emerged that form the foundation of a new transdiscipline.

U.S. Landscape Ordinances Oct 26 2022 State-by-state listings and explanations of municipal landscape ordinances In U.S. Landscape Ordinances, Buck Abbey furnishes landscape architects, planners, land-use attorneys, and students with a much-needed resource. This state-by-state presentation demystifies the complex planning laws and ordinances that determine landscape design parameters for more than 300 American cities. The author highlights sections of each ordinance that pertain to landscape architecture, boils the legalese down to plain English, explains the law's main purpose and regulatory function, and spells out the practical implications from a design perspective. With the help of more than fifty diagrams and drawings that clarify complex spatial concepts, U.S. Landscape Ordinances reviews the entire spectrum of green laws currently on the books, including ordinances that cover: * Parking lots and vehicular use areas * Landscape buffers and screens * Street tree plantings * Open space design * Irrigation * Land clearing and building sites The product of ten years of painstaking research and analysis, U.S. Landscape Ordinances is a unique and invaluable tool for professionals in landscape design and municipal planning. It also offers a deep reservoir of information for students, municipal legislators, community activists, and anyone interested in understanding or developing a community's landscape ordinances.

Landscape dimensions Jun 22 2022 As a key element of individual and social well-being and quality of life, landscape plays an important part in human fulfilment and in reinforcement of European identity. Adopted under the auspices of the Council of Europe, the European Landscape Convention aims to promote the protection, management and planning of landscapes, and to organise international co-operation in this field. It applies to the entire territory of the contracting parties and covers natural, rural, urban and peri-urban areas. It concerns landscapes considered outstanding, as well as everyday or degraded areas. Certain “dimensions” of the landscape are presented in this publication, which addresses key issues for its future, including democracy, education, economy, leisure and advertising. Landscape management processes – and even the term “landscape” itself – are also analysed. This book forms part of a process of reflection on the major themes concerning the living environment.
