Lymphatic Filariasis Apr 08 2021 This book provides up-to-date information on lymphatic filariasis supported with abundant images, tables and algorithms. It is a first such monograph on a disease that has varied presentations which are complete clinical entities, such as chyluria, hydrocele, elephantiasis, etc. This book consists of three parts, parasitology, acute clinical manifestations and chronic presentations of the disease. Approximately 120 million people are infected with lymphatic filariasis in tropical and subtropical countries. About a third of these suffer clinical consequences of this infection, and many are seriously disfigured. India, Indonesia and Nigeria are the most endemic countries in the world. In spite of Global Control Program of WHO, filariasis continues to be a significant medical challenge and current efforts underway will take a long time to bring it under control. Lymphatic Filariasis is meant for general surgeons, physicians, urologists and plastic surgeons, including the postgraduate students. Useful for epidemiologists, internists, and those involved in filariasis prevention programs.

Nanotechnology and Regenerative Engineering Oct 22 2019 Nanotechnology and regenerative engineering have emerged to the forefront as the most versatile and innovative technologies to foster novel therapeutic techniques and strategies of the twenty-first century. The first edition of Nanotechnology and Tissue Engineering: The Scaffold was the first comprehensive source to explain the developments in nanostructured biomaterials for tissue engineering, the relevance of nanostructured materials in tissue regeneration, and the current applications of nanostructured scaffolds for engineering various tissues. This fully revised second edition, renamed Nanotechnology and Regenerative Engineering: The Scaffold, provides a thorough update to the existing material, bringing together these two unique areas to give a perspective of the emerging therapeutic strategies for a wide audience. New coverage includes: Updated discussion of the importance of scaffolds in tissue engineering Exploration of cellular interactions at the nanoscale Complete range of fabrication processes capable of developing nanostructured scaffolds for regenerative engineering Applications of nanostructured scaffolds for neural, skin, cardiovascular, and musculoskeletal regenerative engineering FDA approval process of nanostructure scaffolds Products based on nanostructured scaffolds Due to the unique and tissue-mimic properties of the nanostructured scaffolds, the past five years have seen a tremendous growth in nanostructured materials for biological applications. The revised work presents the current state-of-the-art developments in nanostructured scaffolds for regenerative engineering.
