This title was first published in 2000: As in many other LDCs, in Indonesia small-scale industries (SSIs) are important, particularly with respect to the creation of employment opportunities. SSIs are expected to absorb many millions of workers who have been displaced by current economic crisis. This work seeks to explain the pattern of development of SSIs in Indonesia within a broader theoretical framework. It also deals with a number of SSI development-related aspects that in Indonesia so far have never or rarely been studied, such as the formation of strategic alliance, cluster development, and application of theories of flexible specialization to the LDCs. The book also tries to examine empirically the effects of the current economic crisis and to assess theoretically the likely impact of the full implementation of the agreed IMF reform package on SSI development in the country. Main problems faced by small producers and the government policy environment are highlighted through several detailed examples. During the occupation American policymakers identified elections and education as the wellsprings of a democratic consciousness in Japan. But as the extent of Japan's economic recovery became clear, they placed prosperity at the core of a revised vision for their new ally's future, as Jennifer Miller shows in this fresh appraisal of the Cold War. This book describes the feasibility and status of the use of alternative fuels in marine engineering, as well as the application of liquefied natural gas, biodiesel and their blends as marine fuels, and the combustion of synthetic coal-based fuels. Each chapter in the book ends with a summary, which gives the reader a quick and clear understanding of the main contents of the chapter. The book gives a lot of advice on the selection of equipment and parameters, fuel reserves and preparation for scholars related to alternative fuels in ships, and points them in the way. It contains lots of illustrations and tables and explains it in the form of chart comparison. The authors have developed mathematical models and methods for calculating the parameters of fuel systems for biodiesel fuels and liquefied natural gas. Recommendations for choosing the rational parameters of these systems are given, as are schematic solutions of the fuel systems, recommendations for selecting equipment, storing, and preparing the fuels. Application of the materials described in the book provides the SPP designers with a reliable tool for choosing rational characteristics of the fuel systems operating on alternative fuels and improving the efficiency of their application on ships.
