*Bank Regulation* Aug 22 2019 Bank Regulation: Effects on Strategy, Financial Accounting and Management Control discusses and problematizes how regulation is affecting bank

strategies as well as their financial accounting and management control systems. Following a period of bank de-regulation, the new millennium brought a drastic change, with many new regulations. Some of these are the result of the financial crisis of 2008-2009. Other regulations, such as the introduction in 2005 of International Financial Reporting Standards (IFRS) for quoted companies in the EU, can be related to the introduction of a new global accounting regime. It is evident from annual reports of banks that the number of new regulations in recent years is high and that they cover many different functional areas. The objectives of these regulations are also ambitious; to improve governance and control, contributing to a high level of financial stability for banks. These objectives are obviously of great concern for an industry that directly and indirectly affects the financial situation not only of individuals and organizations but also nation states. Considering the importance of banks in society, it is of little surprise that the attention of both scholars and practitioners has been directed towards how banks comply with new regulations and if the intended objectives of the regulations are met. This book will be of great value to all those interested in financial stability matters (practitioners, policy-makers, students, academics), as well as to accounting and finance scholars.

Reprinted May, 1949 PRINTED IN THE UNITED STATES OF A1CVUCA In this volume the American Institute of Account ants is commonly referred to as the Institute, the American Accounting Association as the Associa tion, and the National Association of Railroad and Utilities Commissioners as the NARUC. Foreword FINANCIAL ACCOUNTING is now generally recognized as be ing primarily historical in character and as having for its most important function the extraction and presentation of the essence of the financial experience of businesses, so that decisions affecting the present and the future may be taken in the light of the past. The rules of accounting, even more than those of law, are the product of experience rather than of logic. Similarly, this book is an attempt to extract and present the essence of an experience in financial accounting in the hope that it may be helpful to those called upon to deal with the problems of the future. It is not the result of a study and appraisal of authorities, and the views that are expressed are those of its author alone indeed, publication has been delayed until formal ties and official positions which might have been deemed, to imply more than a personal responsibility for them have been relinquished. In part, it is based on lectures delivered at the Graduate School of Busi ness Administration of Harvard University and papers writ ten for other purposes since 1936. A few passages have been reproduced from the volume which those who were then partners, with generous insight, prepared in that year to mark the twenty-fifth anniversary of the authors assumption of senior partnership. The writing of such a book seemed to be justified by the fact that the experience on which it is based extended over a period of exceptional interest and was enriched by close association with men of eminence here and abroad, not only vii viii FOREWORD in accounting but in government, business, finance, law, and economics. The obligation owed to those who have con tributed to that experience is great, but can be expressed to them here only collectively. Grateful recognition must, however, be given to the guidance, friendship, and inspiration of Arthur Lowes Dickinson, who by his abilities, his writings, and above all, by his example, earned an outstanding place among the independent accountants of America, to whom this book is gratefully dedicated.
