Instructional Strategies for Improving Students' Learning

Jul 02 2020 The twin objectives of the series Psychological Perspectives on Contemporary Educational Issues are: (1) to identify issues in education that are relevant to professional educators and researchers; and (2) to address those issues from research and theory in educational psychology, psychology, and

related disciplines. The present volume, consisting of two focal chapters, commentaries, and final responses targets instructional strategies for improving students' learning in two of the traditional "three R" areas, reading and arithmetic (mathematics), in the elementary school grades. The focal chapters in those two skill areas are written by leading contributors to the reading and mathematics research literatures, Cathy Collins Block for the reading section and Douglas Clements and Julie Sarama for the mathematics

section. Few would dispute the essentiality of these two curricular domains in laying the foundation for the development of students' competencies in a vast array of academic disciplines in both the in- and out-of-school years that lie ahead. The present volume is intended for practitioners and researchers who are seeking the latest instructional research-based strategies for improving students' early reading and mathematics performance.

An Architectural Approach to Instructional Design Jun 12 2021
Winner of the 2014 AECT Design & Development Outstanding Book

Award An Architectural Approach to Instructional Design is organized around a groundbreaking new way of conceptualizing instructional design practice. Both practical and theoretically sound, this approach is drawn from current international trends in architectural, digital, and industrial design, and focuses on the structural and functional properties of the artifact being designed rather than the processes used to design it. Harmonious with existing systematic design models, the architectural approach expands the scope of design discourse by

introducing new depth into the conversation and merging current knowledge with proven systematic techniques. An architectural approach is the natural result of increasing technological complexity and escalating user expectations. As the complexity of design problems increases, specialties evolve their own design languages, theories, processes, tools, literature, organizations, and standards. An Architectural Approach to Instructional Design describes the implications for theory and practice, providing a powerful and commercially

relevant
introduction for all
