Neufert's Architects' Data is an essential reference for the initial design and planning of a building project. It provides, in one concise volume, the core information needed to form the framework for the more detailed design and planning of any building project. Organised largely by building type, it covers the full range of preliminary considerations, and with over 6200 diagrams it provides a mass of data on spatial requirements. Most illustrations are dimensioned and each building type includes plans, sections, site layouts and design details. An extensive bibliography and a detailed set of metric/ imperial conversion tables are included. Since it was first published in Germany in 1936, Ernst Neufert's handbook has been progressively revised and updated through 39 editions and many translations. This fourth English language edition is translated from the 39th German edition, and represents a major new edition for an international, English speaking readership. Reviews of the Previous Edition: "Neufert's Architects' Data was the first book I bought when I started my studies in architecture. It was invaluable for me then and it is still a useful aid in my designs." —Cesar Pelli "With this thorough rewrite Neufert has produced yet again an invaluable reference book." —The Architects' Journal The 2013-2014

annual report highlights the establishment and first activities of the Gulf Research Program, an independent, science-based program founded in 2013. Through grants, fellowships, and other activities, the Gulf Research Program seeks to enhance oil system safety and the protection of human health and the environment in the Gulf of Mexico and other regions along the U.S. outer continental shelf with offshore oil and gas operations. This report reviews some of the Gulf Research Program's key accomplishments and demonstrates how what was learned throughout the planning process shaped the Program's foundation - from its strategic vision to the initial funding opportunities. The Gulf Research Program will build on this foundation while evolving to meet new challenges during its 30-year duration, 2013-2043. Each year, the Gulf Research Program will produce an annual report to summarize how funds were used. These reports will review accomplishments, highlight activities, and, over time, assess metrics to determine how the Gulf Research Program is progressing in accomplishing its goals. The 2013-2014 annual report is the first report in this series. This final report presents the results of the literature review and three surveys, describes the design, methodologies, and outcomes of the pilot workshop, offers recommendations based on the survey research and workshop outcomes for supporting and accelerating leadership development for transportation CEOs, and presents a guide designed to assist new CEOs in determining how to perform their role effectively. While there continues to be refinement in defining and assessing sustainable management, there remains the urgent need for policies that create the conditions that support sustainability and can halt or slow destructive practices already underway. Carol Colfer and her contributors maintain that standardized solutions to forest problems from afar have failed to address both human and environmental needs. Such approaches, they argue, often neglect the knowledge that local stakeholders have accumulated over generations as forest managers and do not address issues involving the diversity and well-being of groups within communities. The contributors note that these problems persist despite clear evidence that equity and social relationships, including gender roles, are important factors in the ways that communities adapt to change and manage forest resources overall. The Equitable Forest offers an alternative to traditional, externally organized strategies for forest management. Termed adaptive collaborative management (ACM), the approach tries to better acknowledge the diversity, complexity, and unpredictability of human and natural systems. ACM works to strengthen local institutions and use the knowledge and capacity of groups in local communities to enhance the health and well-being of both forests and the people who live in and around them. The Equitable Forest provides a detailed explanation of the descriptive, analytical, and methodological tools of ACM, along with accounts of early stages of its implementation in tropical regions of Asia, Africa, and Latin America. Although the contributors make it clear that it is too soon to evaluate the efficacy of ACM, their work is supported by evidence that rural communities do make important contributions when involved in formal forest management; that management strategies are most effective when flexible and tailored to local contexts; and that efforts by outside governmental and nongovernmental organizations to support local management are feasible from the policymaking perspective, and desirable for their impact on human, economic, and environmental well-being. The Z notation has been developed at the Programming Research Group at the Oxford University Computing Laboratory and elsewhere for over a decade. It is now used by industry as part of the software (and hardware) development process in both Europe and the USA. It is currently undergoing BSI standardisation in the UK, and has been proposed for ISO standardisation internationally. In recent years researchers have begun to focus increasingly on the development of techniques and tools to encourage the wider application of Z and other formal methods and notations. This volume contains papers from the Seventh Annual Z User Meeting, held in London in December

1992. In contrast to previous years the meeting concentrated specifically on industrial applications of Z, and a high proportion of the participants came from an industrial background. The theme is well represented by the four invited papers. Three of these discuss ways in which formal methods are being introduced, and the fourth presents an international survey of industrial applications. It also provides a reminder of the improvements which are needed to make these methods an accepted part of software development. In addition the volume contains several submitted papers on the industrial use of Z, two of which discuss the key area of safety-critical applications. There are also a number of papers related to the recently-completed ZIP project. The papers cover all the main areas of the project including methods, tools, and the development of a Z Standard, the first publicly-available version of which was made available at the meeting. Finally the volume contains a select Z bibliography, and section on how to access information on Z through `comp.specification.z`, the international, computer-based USENET newsgroup. Z User Workshop, London 1992 provides an important overview of current research into industrial applications of Z, and will provide invaluable reading for researchers, postgraduate students and also potential industrial users of Z. Am 25. und 26. Februar 1993 findet in Hamburg der zweite Workshop "SEUH - Software Engineering im Unterricht der Hochschulen" statt. Auch dieses zweite Treffen wurde mit Unterstützung der GI-Fachgruppen 2. 1. 1 (Software Engineering) und 4. 3. 1 (Requirements Engineering in der industriellen Anwendung) sowie des German Chapter of the ACM organisiert. Der IBM Deutschland GmbH und dem Förderverein des Fachbereichs Elektrotechnik/Informatik der Fachhochschule Hamburg danken wir sehr für ihre Spenden zur Durchführung des Workshops. This multidisciplinary handbook explores concrete case studies which illustrate how sustainability science and research can contribute to the realization of the goals of the 2030 Agenda for Sustainable Development. It contains contributions from sustainability researchers from across the world. A previously unpublished manual from the Floyd Clymer archives. It includes complete technical data, service and maintenance information and comprehensive detailed instructions for the repair and overhaul of all major and minor mechanical and electrical components for the 1948 to 1961 Jaguar MK 7, MK 8, MK 9 and the XK120, XK140, XK150 automobiles. This is one in a series of manuals for car or motorcycle owners. Each book provides information on routine maintenance and servicing, with tasks described and photographed in a step-by-step sequence so that even a novice can do the work. easy-to-understand, step-by-step instructions and screen shots to show users how to complete the design technique. Coupe, Hatchback & Convertible. Also covers Convertible models to August 2003. Does NOT cover new Saab 9-3 range introduced September 2002 (Convertible September 2003) Petrol: 2.0 litre (1985cc) & 2.3 litre (2290cc), inc. turbo. Turbo-Diesel: 2.2 litre (2171cc). This comprehensively rewritten, updated and extended new edition of this established text focuses on what has become the most important single facet of the quantity surveyor's role - cost management. The scope of the book has been broadened to take account of the widening and more sophisticated cost management and control service that clients now require. The book examines the factors influencing building costs and how the precontract costs can be estimated, analysed and controlled, to ensure that buildings can be completed within the agreed budget and timescale, and be of acceptable quality, function effectively and provide value for money. A new chapter on value management has been added, together with an introductory chapter on cost modelling; the chapter on life cycling costing is extended, while the sections on energy conservation and occupancy costs are expanded. Throughout the text many new case studies, with supporting tables and diagrams, are included in order to enhance the value of this book to the student and the practitioner. Since 1973, TEXAS MONTHLY has chronicled life in contemporary Texas, reporting on vital issues such as politics, the environment, industry, and education. As a leisure guide, TEXAS MONTHLY continues to be the indispensable authority on the Texas scene, covering music, the arts, travel, restaurants, museums, and cultural events with its insightful recommendations. The second covering the issues of security in complex Internet-based information systems. Each of these 've conferences encourages researchers to treat their respective topics within a framework that incorporates jointly (a) theory, (b) conceptual design and development, and (c) applications, in particular case studies and industrial solutions. Following and expanding the model created in 2003, we again solicited and selected quality workshop proposals to complement the more "archival" nature of the main conferences with research results in a number of selected and more "avant-garde" areas related to the general topic of distributed computing. For instance, the so-called Semantic Web has given rise to several novel research areas combining linguistics, information systems technology, and artificial intelligence, such as the modeling of (legal) regulatory systems and the ubiquitous nature of their usage. We were glad to see that in spite of On The Move switching sides of the Atlantic, seven of our earlier successful workshops (notably AweSOMe, SWWS, ORM, On To Content, MONET, PerSys, RDDS) re-appeared in 2008 with a third or even fourth edition, sometimes by alliance with other newly emerging workshops, and that no fewer than seven brand-new independent workshops could be selected from proposals and hosted: ADI, COMBEK, DiSCo, IWSSA, QSI and SEMELS. Workshop audiences productively mingled with each other and with those of the main conferences, and there was considerable overlap in authors. The OTM organizers are especially grateful for the leadership, diplomacy and competence of Dr. Pilar Herrero in managing this complex and delicate process for the 5th consecutive year. This book is specifically for the version of Crystal Reports that comes with Visual Studio 2005. If you have been looking for a beginners book that has a lot of easy to understand, step-by-step instructions and screen shots that show you how to learn and use the version of Crystal Reports that comes bundled with Visual Studio 2005, this is the book for you. The No Stress Tech Guide To Crystal Reports for Visual Studio 2005 For Beginners book, is a self-paced visual guide to learning Crystal Reports and is written from the perspective that the reader has not created a report before or has not used Crystal Reports. This book is for the beginner and intermediate user. To help you become familiar with the options and features, this book contains over 500 illustrations that provide a visual tour of the software. Broadband is the great infrastructure challenge of the early 21st century. Broadband is a foundation for economic growth, job creation, global competitiveness and a better way of life. The number of Americans who have broadband at home has grown from 8 million in 2000 to nearly 200 million last year. But, 100 million Americans do not have broadband at home. In early 2009, Congress directed the FCC to develop a National Broadband Plan to ensure that every American has access to broadband capability. This plan must also include a strategy for achieving affordability and maximizing use of broadband. The plan presented here ensures that the entire broadband ecosystem, networks, devices, content and applications, is healthy. Business information systems is a rapidly developing domain. There are many topics that deserve attention but have not yet found a place in canonical research. Workshops give researchers the possibility to share preliminary ideas, first - perimental results, or to discuss research hypotheses. Discussions held during presentations strengthen the paper and prepare it for publication. From our - perience, workshops are a perfect instrument with which to create a community around very speci?c research topics, thus offering the opportunity to promote it. Topics that do not find critical feedback at the main International Conference on Business Information Systems (BIS) may experience fruitful discussion when confronted with a well-focused audience. Over the last few decades, business information systems have been one of the most important factors of the transition toward a knowledge-based economy. At the same time they have been subject to continuous rapid development and innovation driven both by industry and by academia. For the last 12 years these innovations were carefully observed but also shaped by researchers attending BIS yearly. ECOOP 2002 Workshop Reader Maintenance and repair of all components, in immense detail. Haynes disassembles every subject vehicle and documents every step with thorough instructions and clear photos. Haynes repair manuals are used by the pros, but written for the do-it-yourselfer.
