Thinking About Human Memory provides a novel analytical approach to understanding memory that considers the goals of the memory task, the cues and information available, the opportunity to learn, and interference from irrelevant information (noise). Each of the five chapters describing this approach introduces historical ideas and

demonstrates how current thinking both differs from and is derived from them. These chapters also contain analyses of current problems designed to demonstrate the power of the approach. In a subsequent chapter, the authors discuss how memory is controlled by the environment, by others, and by ourselves, and then apply their insights to the problem solving of children, our hominin ancestors, and scrub jays. Finally, the questions of how to define episodic memory and how to investigate phylogenetic and developmental changes in memory are addressed. This book will appeal to memory researchers, including applied researchers, and advanced students.

Towards a Philosophy of Education is Charlotte Mason's final book in her Homeschooling Series, written after years of seeing her approach in action. This volume gives the best overview of her philosophy, and includes the final version of her 20 Principles. This book is particularly directed to parents of older children, about ages 12 and up, but is a valuable overview for parents of younger children as well. Part I develops and discusses her 20 principles; Part II discusses the practical application of her theories. Charlotte Mason was a late nineteenth-century British educator whose ideas were far ahead of her time. She believed that children are born persons worthy of respect, rather than blank slates, and that it was better to feed their growing minds with living literature and vital ideas and knowledge, rather than dry facts and knowledge filtered and pre-digested by the teacher. Her method of

education, still used by some private schools and many homeschooling families, is gentle and flexible, especially with younger children, and includes first-hand exposure to great and noble ideas through books in each school subject, conveying wonder and arousing curiosity, and through reflection upon great art, music, and poetry; nature observation as the primary means of early science teaching; use of manipulatives and real-life application to understand mathematical concepts and learning to reason, rather than rote memorization and working endless sums; and an emphasis on character and on cultivating and maintaining good personal habits. Schooling is teacher-directed, not child-led, but school time should be short enough to allow students free time to play and to pursue their own worthy interests such as handicrafts. Traditional Charlotte Mason schooling is firmly based on Christianity, although the method is also used successfully by secular families and families of other religions. This Book attempts to make a comprehensive and critical exposition of all the facets of teaching. It evaluates the comparative soundness of the Principles, Methods, Techniques and Devices of Teaching. The chief accent of the book is on helping teachers to teach better. The objective is strictly utilitarian and is designed to serve as a reliable guide to the work in the classroom. The book also offers practical suggestions for making the teaching-learning process effective, inspirational & interesting. It incorporates the approaches recommended by eminent educational

philosophers and practitioners. A detailed survey of the valuable teaching practices followed in India and abroad also find an important place in the book.
