The 2008 Olympic Games will be held in Beijing but many human rights activists support a boycott. They liken the circumstances to previous governments that used the games to glorify their regimes - most notoriously the Nazis in 1936. What has led to this perception and is it fair? *Sport, Revolution and the Beijing Olympics* is a cultural history of sport in China and challenges many such ingrained Western assumptions. The authors unpick the relationship of sport to imperialism and revolution, and examine its significance in both China and Taiwan at governmental and everyday levels. In the process, they successfully debunk harmful myths, such as the prevalence of drugs in Chinese sport among women athletes, and present a balanced view that is a much-needed corrective to popular

understanding. Libraries today provide a wider variety of services, collections, and tools than at any time in the past. This book explores how reference librarianship is changing to continue to help users find information they need in this shifting environment. Army chaplains have long played an integral part in America's armed forces. In addition to conducting chapel activities on military installations and providing moral and spiritual support on the battlefield, they conduct memorial services for fallen soldiers, minister to survivors, offer counsel on everything from troubled marriages to military bureaucracy, and serve as families' points of contact for wounded or deceased soldiers—all while risking the dangers of combat alongside their troops. In this thoughtful study, Anne C. Loveland examines the role of the army chaplain since World War II, revealing how the corps has evolved in the wake of cultural and religious upheaval in American society and momentous changes in U.S. strategic relations, warfare, and weaponry. From 1945 to the present, Loveland shows, army chaplains faced several crises that reshaped their roles over time. She chronicles the chaplains' initiation of the Character Guidance program as a remedy for the soaring rate of venereal disease among soldiers in occupied Europe and Japan after World War II, as well as chaplains' response to the challenge of increasing secularism and religious pluralism during the "culture wars" of the Vietnam Era. "Religious accommodation," evangelism and proselytizing, public prayer, and "spiritual fitness" provoked heated controversy among chaplains as well as civilians in the ensuing decades. Then, early in the twenty-first century, chaplains themselves experienced two crisis situations: one the result of the Vietnam-era antichaplain critique, the other a consequence of increasing religious pluralism, secularization, and

sectarianism within the Chaplain Corps, as well as in the army and the civilian religious community. By focusing on army chaplains' evolving, sometimes conflict-ridden relations with military leaders and soldiers on the one hand and the civilian religious community on the other, Loveland reveals how religious trends over the past six decades have impacted the corps and, in turn, helped shape American military culture. This popular, topically organized, and thoroughly updated child and adolescent development text presents you with the best theories, research, and practical advice that developmentalists have to offer today. Authors David R. Shaffer and Katherine Kipp provide you with a current and comprehensive overview of child and adolescent development, written in clear, concise language that talks to you rather than at you. The authors also focus on application showing how theories and research apply to real-life settings. As a result, you will gain an understanding of developmental principles that will help you in your roles as parents, teachers, nurses, day-care workers, pediatricians, psychologists, or in any other capacity by which you may one day influence the lives of developing persons. Vol. 2 includes extra number, "Experimental schools in England," Jan. 1926. A must-have professional reference for researchers and educators in psychology, sociology, anthropology, public health, genetics, medicine, and the biological sciences, this issue of the Annual Review of Gerontology and Geriatrics discusses how complex biological, behavioral, and social systems interact to create and impact health. This knowledge is essential to maintaining positive

health outcomes over the life span and across a variety of populations and settings. With contributions by leading world scientists, this trusted annual volume reviews the current literature and presents examples of how biological factors underlie behavioral factors to impact health in later life. It also offers methods for examining these complex systems of biology and behavior, and explores how social scientists use this information in their research. Key Topics: Genetic and environmental contributions to Alzheimer's disease and age-associated memory changes Vascular depression, including cardiovascular implications for mental health The impact of spirituality on health Family comorbidity and the family context as a source of health Stress and coping Exercise and oxidative damage

Asia has long been an ideological battleground between capitalism and communism, between nationalism and Westernisation and between the nation-state and globalization. This book is a history of the Asian region from 1945 to the present day which delineates the various ideological battles over Asia's development. Subjects covered include: * theories of development * decolonization * US political and economic intervention * the effects of communism * the end of the Cold War * the rise of neo-liberalism * Asia after the crisis * Asia in the era of globalisation

Broad in sweep and rich in theory and empirical detail, this is an essential account of the growth of 'Asian miracle' and its turbulent position in the global economy of the twenty-first century. This issue of Clinics in Perinatology will carry the reader through the perinatal period and examine pain management throughout that continuum. Beginning with the genetics of obstetrical pain and opioid use in pregnancy, the discussion moves to the provision of anesthesia to the mother and fetus during fetal surgery - an area of intense concern and

interest in many centers. There is an extensive discussion of both pharmacologic and non-pharmacologic management of pain during delivery. A discussion of regional anesthetic techniques is increasingly relevant in light of increasing evidence of adverse neurodevelopmental consequences of fetal exposure to general anesthetics and sedatives. Pain, its implications and management, are extensively covered including discussions of how to assess neonatal pain and how best to provide sedation and non-pharmacologic pain management, systemic pharmacologic, or regional techniques. Of particular interest are the reviews of the potential neurodevelopmental impact of both the treatment and the failure to adequately treat pain in the newborn. This topic is receiving an enormous amount of attention from all those who care for children as well as government and the media. The Oxford Handbook of the Archaeology of Death and Burial reviews the current state of mortuary archaeology and its practice, highlighting its often contentious place in the modern socio-politics of archaeology. It contains forty-four chapters which focus on the history of the discipline and its current scientific techniques and methods. Written by leading, international scholars in the field, it derives its examples and case studies from a wide range of time periods, such as the middle palaeolithic to the twentieth century, and geographical areas which include Europe, North and South America, Africa, and Asia. Combining up-to-date knowledge of relevant archaeological research with critical assessments of the theme and an evaluation of future research trajectories, it draws attention to the social, symbolic, and theoretical aspects of interpreting mortuary archaeology. The volume is well-illustrated with maps, plans, photographs, and illustrations and is ideally suited for students and researchers. This useful two-

volume set will provide buyers of subject encyclopedias with a substantial amount of valuable information they can use in making their purchasing decisions. It will also provide all types of librarians and their patrons with a quick, one-stop method for locating the appropriate subject encyclopedias for their needs and for locating articles in the 100 encyclopedias. Librarians who specialize in bibliographic instruction will also find it to be a useful tool for teaching students how to locate needed information. Coverage of Russian, Eurasian and East European issues. Publishes in-depth articles on labor subjects, current labor statistics, information about current labor contracts, and book reviews. To safeguard public health, the US Environmental Protection Agency (EPA) must keep abreast of new scientific information and emerging technologies so that it can apply them to regulatory decision-making. For decades the agency has dealt with questions about what animal-testing data to use to make predictions about human health hazards, how to perform dose-response extrapolations, how to identify and protect susceptible subpopulations, and how to address uncertainties. As alternatives to traditional toxicity testing have emerged, the agency has been faced with additional questions about how to incorporate data from such tests into its chemical assessments and whether such tests can replace some traditional testing methods. Endocrine active chemicals (EACs) have raised concerns that traditional toxicity-testing protocols might be inadequate to identify all potential hazards to human health because they have the ability to modulate normal hormone function, and small alterations in hormone concentrations, particularly during sensitive life stages, can have lasting and significant effects. To address concerns about potential human health effects from EACs at low doses, this report develops a

strategy to evaluate the evidence for such low-dose effects. This volume considers the ways in which educational research is being shaped by policy across the globe. Policy effects on research are increasingly influential, as policies in and beyond education drive the formation of a knowledge-based economy by supporting increased international competitiveness through more effective, evidence-based interventions in schooling, education and training systems. What consequences does this increased steering have for research in education? How do transnational agencies make their influence felt on educational research? How do national systems and traditions of educational research - and relations with policy - respond to these new pressures? What effects does it have on the quality of research and on the freedom of researchers to pursue their own agendas? The 2006 volume of the World Yearbook of Education explores these issues, focusing on three key themes: globalising policy and research in education steering education research in national contexts global-local politics of education research. The 2006 volume has a truly global reach, incorporating transnational policy perspectives from the OECD and the European Commission, alongside national cases from across the world in contrasting contexts that include North and South America, Canada, France, Singapore, China, Russia and New Zealand. The range of contributions reflect how pervasive these developments are, how much is new in this situation and to what extent evidence-based policy pressures on research in education build on past relationships between education and policy. This book considers the impact of the steering processes on the work and identities of individual researchers and considers how research can be organised to play a more active role in the politics of the knowledge economy and learning society. From

going AWOL to collaborating with communists, assaulting fellow servicemen to marrying without permission, military crime during the Cold War offers a telling glimpse into a military undergoing a demographic and legal transformation. The post-World War II American military, newly permanent, populated by draftees as well as volunteers, and asked to fight communism around the world, was also the subject of a major criminal justice reform. By examining the Cold War court-martial, *Defending America* opens a new window on conflicts that divided America at the time, such as the competing demands of work and family and the tension between individual rights and social conformity. Using military justice records, Elizabeth Lutes Hillman demonstrates the criminal consequences of the military's violent mission, ideological goals, fear of homosexuality, and attitude toward racial, gender, and class difference. The records also show that only the most inept, unfortunate, and impolitic of misbehaving service members were likely to be prosecuted. Young, poor, low-ranking, and nonwhite servicemen bore a disproportionate burden in the military's enforcement of crime, and gay men and lesbians paid the price for the armed forces' official hostility toward homosexuality. While the U.S. military fought to defend the Constitution, the Cold War court-martial punished those who wavered from accepted political convictions, sexual behavior, and social conventions, threatening the very rights of due process and free expression the Constitution promised.

Considered to be the first periodical in England to offer reviews. In each issue the longer reviews are in the front section followed

by short reviews of lesser works. It featured the novelist and poet Oliver Goldsmith as an early contributor. Griffiths himself, and likely his wife Isabella Griffiths, contributed review articles to the periodical. Later contributors included Dr. Charles Burney, John Cleland, Theophilus Cibber, James Grainger, Anna Letitia Barbauld, Elizabeth Moody, and Tobias Smollet.
