Regulating Public Services Jul 23 2022 Regulation is one of the tools used by governments to control monopolistic behaviour in the provision of public services such as electricity, transport or water. Technological and financial innovations have changed these public services markets since the 1990s, bringing new regulatory challenges, including technological and financial

ones. This book demonstrates that basic regulatory theory and tools can address these new challenges, in addition to more traditional regulatory issues, both in developed and developing economies. The theory covered in the book is robust enough to guide regulators in multiple contexts, including those resulting from the effects of financial or political constraints, evolving market structures or the need to adapt to institutional weaknesses, climate change and poverty concerns that demand regulatory intervention. A bridge between theory and an evolving global practice, this book mobilizes the lessons of the past to analyse the future of economic regulation.

Microeconomics Mar 19 2022 Revised edition of the authors' *Microeconomics*, c2013.

Nonparametric and Semiparametric Models Jan 25 2020 The statistical and mathematical principles of smoothing with a focus on applicable techniques are presented in this book. It naturally splits into two parts: The first part is intended for undergraduate students majoring in mathematics, statistics, econometrics or biometrics whereas the second part is intended to be used by master and PhD students or researchers. The material is easy to accomplish since the e-book character of the text gives a maximum of flexibility in learning (and teaching) intensity.

Political Competition and Economic Regulation May 09 2021 Organized, readable, technically sound and comprehensive from both theoretical and empirical standpoints, this book summarizes a vast amount of institutional, historical and descriptive detail. Using case studies from the US, Canada, Germany and Switzerland as well as the European Union and the global economy, this is the first book of its kind to examine historical evidence on how competition among states - or the lack of it - affects regulation, especially labour market regulation. Edited by internationally respected scholars of economics and containing contributions from eminent economists, this book reveals important implications as to whether European political integration leads to more regulation and whether globalization restrains regulation. It will be of great interest to both economists and students engaged with political economy, public choice and regulation.

Sustainability Apr 20 2022 of ecological (also biological) variables b which interact in their dynamic t evolution: $\det \frac{db}{dt} = f(e(t), b(t))'$ $\frac{db}{dt} = g(e(t), b(t))$. Among the solution paths to this interaction between economic and ecological variables, we look for those which are sustainable. Sustainable paths are typically those along which the values of certain key stocks are always positive, these key stocks being important environmental resources. The types of paths on which certain variables can be positive forever include stationary solutions with appropriate positivity conditions, or limit cycles or chaotic attractors satisfying the same positivity conditions. These paths, and the paths which approach them, constitute the set of sustainable paths. From amongst these we have to choose one or more which are in some sense the best. Note that rather than imposing positivity of certain stocks in the long run as a condition for sustainability, we would prefer to derive this as a characteristic of optimal solutions from more fundamental judgements about the valuation of stocks and flows: this is the route pursued by the papers in this volume. The introductory paper by Heal in Section I reviews these matters in general terms, not going into technical details: it discusses the precedents for a concept of sustainability in welfare economics, and reviews alternative optimality concepts and their connection to sustainability.

Approximation Algorithms for Combinatorial Optimization Sep 25 2022 This book constitutes the refereed proceedings of the 5th International Workshop on Approximation Algorithms for Combinatorial Optimization Problems, APPROX 2002, held in Rome, Italy in September 2002. The 20 revised full papers presented were carefully reviewed and selected from 54 submissions. Among the topics addressed are design and analysis of approximation algorithms, inapproximability results, online problems, randomization techniques, average-case analysis, approximation classes, scheduling problems, routing and flow problems, coloring and partitioning, cuts and connectivity, packing and covering, geometric problems, network design, and applications to game theory and other fields.

The Ethics and the Economics of Minimalist Government May

21 2022 . . . Roth's book is useful and valuable. Using modern secular thought as his starting point, he reaches roughly the same conclusions that one would reach reasoning from the older Christian tradition. There is certainly much to like about that effort. Paul A. Cleveland, *Markets & Morality* This book is one of the best discussions of welfare economics since Murray Rothbard's classic paper of 1956 *Toward a Reconstruction of Utility and Welfare Economics*. David Gordon, *The Mises Review* Timothy Roth shows that social welfare theory, as currently defended by welfare economists and policymakers, is based on a confused and untenable moral theory, is incompatible with a rights-based legal order and is bound to promote unjust and arbitrary redistributions. By advocating a return to the Kantian conception of the moral agent, Roth shows the way to a normative economics that harmonizes with both intuitive morality and the American legal and constitutional tradition. Roger Scruton, *Writer and Philosopher, formerly University Professor and Professor of Philosophy at Boston University, US* The moral imperative of individual autonomy, embodied in the Kantian Rawlsian perspective on social order, cannot be reconciled with the utilitarian presuppositions that inform normative applications of modern economics. This book exposes the contradictions that are present when the basic philosophical foundations are ignored, a stance that is, unfortunately, characteristic of much modern discourse as well as political practice. James M. Buchanan, *George Mason University, US and a Nobel Laureate* At a time when technical economics dominates the thinking of much of the profession, it is important to be reminded that economics has roots in moral philosophy. Certainly this book, which deftly explores the ethical prior commitments underlying economic analysis, succeeds in bringing philosophical issues to the forefront. But it does more. Roth's closely reasoned study provides a clear exposition of the Kantian Rawlsian approach to public policy, and thus is able to establish a convincing critique of orthodox welfare theory. In general, the book offers a valuable change of perspective on social questions. Eirik G. Furubotn, *Texas A&M University, US* Because it is technically flawed and morally bankrupt, the author argues, the economist

s consequence-based, procedurally detached theory of the state has contributed to the growth of government. As part of the Kantian Rawlsian contractarian project, this book seeks to return economics to its foundations in moral philosophy. Given the moral equivalence of persons, the greatest possible equal participation must be promoted, persons must be impartially treated and, because it is grounded in consequentialist social welfare theory (SWT), the economist s theory of the state must be rejected. Ad hoc deployment of SWT has facilitated discriminatory rent seeking and contributed to larger government. In contrast, this book argues that equal political participation and a constitutional impartiality constraint minimize rent seeking, respect individual perceptions of the public good and underwrite the legitimacy of government. Economists, moral philosophers and political scientists will find this book a unique contribution to the literature.

Handbook of Survey Research Feb 24 2020 Handbook of Survey Research provides an introduction to the theory and practice of sample survey research. It addresses both the student who desires to master these topics and the practicing survey researcher who needs a source that codifies, rationalizes, and presents existing theory and practice. The handbook can be organized into three major parts. Part 1 sets forth the basic theoretical issues involved in sampling, measurement, and management of survey organizations. Part 2 deals mainly with ""hands-on,"" how-to-do-it issues: how to draw theoretically acceptable samples, how to write questionnaires, how to combine responses into appropriate scales and indices, how to avoid response effects and measurement errors, how actually to go about gathering survey data, how to avoid missing data (and what to do when you cannot), and other topics of a similar nature. Part 3 considers the analysis of survey data, with separate chapters for each of the three major multivariate analysis modes and one chapter on the uses of surveys in monitoring overtime trends. This handbook will be valuable both to advanced students and to practicing survey researchers seeking a detailed guide to the major issues in the design and analysis of sample surveys and to current state of the art practices in sample surveys.

Strategic and Practical Approaches for Information Security Governance: Technologies and Applied Solutions Nov 27 2022 Organizations, worldwide, have adopted practical and applied approaches for mitigating risks and managing information security program. Considering complexities of a large-scale, distributed IT environments, security should be proactively planned for and prepared ahead, rather than as used as reactions to changes in the landscape. ***Strategic and Practical Approaches for Information Security Governance: Technologies and Applied Solutions*** presents high-quality research papers and practice articles on management and governance issues in the field of information security. The main focus of the book is to provide an organization with insights into practical and applied solutions, frameworks, technologies and practices on technological and organizational factors. The book aims to be a collection of knowledge for professionals, scholars, researchers and academicians working in this field that is fast evolving and growing as an area of information assurance.

Concerned Markets Sep 20 2019 When political, social, technological and economic interests, values, and perspectives interact, market order and performance become contentious issues of debate. Such situations are becoming increasingly common and make for rich sites of research

The Political Economy of Federalism in India Mar 07 2021 This is a comprehensive work on India's fiscal federalism. The book surveys and analyses the evolution of fiscal federalism from the angle of political economy and brings to bear analytical skills of a very high order to assess and relate the political and administrative dimensions of India's federal system to fiscal federal issues. The authors present a synthesized framework, combining both economic and political elements in a political economy prism such as the Centre-State relations with not only the political perspectives but also the economic ones with the belief that only such a framework can provide a useful guide to implementable reform of policies.

Regulating Data Monopolies Jul 11 2021 This book analyzes the business model of enterprises in the digital economy by taking an economic and comparative perspective. The aim of this book is to conduct an in-depth analysis of the anti-

competitive behavior of companies who monopolize data, and put forward the necessity of regulating data monopoly by exploring the causes and characteristics of their anti-competitive behavior. It studies four aspects of the differences between data monopoly and traditional monopolistic behavior, namely defining the relevant market for data monopolies, the entry barrier, the problem of determining the dominant position of data monopoly, and the influence on consumer welfare. It points out the limitations of traditional regulatory tools and discusses how new regulatory methods could be developed within the competition legal framework to restrict data monopolies. It proposes how economic analytical tools used in traditional anti-monopoly law are facing challenges and how competition enforcement agencies could adjust regulatory methods to deal with new anti-competitive behavior by data monopolies.

Reproducible Econometrics Using R Jan 05 2021 Linear time series methods -- Introduction to linear time series models -- Random walks, unit roots, and spurious relationships -- Univariate linear time series models -- Robust parametric inference -- Robust parametric estimation -- Model uncertainty -- Advance -- Bibliography -- Author index -- Subject index

Economic Analysis of Environmental Policy Aug 20 2019 The relationship between economic growth and the environment is at the forefront of public attention and poses serious challenges for policymakers around the world. Economic Analysis of Environmental Policy, a textbook for advanced undergraduate and graduate courses, provides a rigorous and thorough explanation of modern environmental economics, applying this exposition to contemporary issues and policy analysis. Opening with a discussion of contemporary pollution problems, institutional players and the main policy instruments at our disposal, Ross McKittrick develops core theories of environmental valuation and optimal control of pollution. Chapters that follow cover issues like tradable permits, regulatory standards, emission taxes, and polluter liability as well as advanced topics like trade and the environment, sustainability, risk, inequality, and self-monitoring. Throughout, McKittrick uses clear, intuitive, and coherent

analytical tools, so that students, academics, and practitioners can develop their policy analysis skills while comprehending the debates and challenges at the frontier of this exciting and rapidly-developing field.

Intergovernmental Fiscal Relations Apr 08 2021 The main objective of this book is to restate the important theories and evidence from economic analysis concerning intergovernmental fiscal issues. More importantly, the second objective of the book is to identify gaps in knowledge, empirical uncertainties, and missing theoretical structures and then to establish a preliminary agenda for new research on this topic. The book is organized in two sections. The first covers the core body of intergovernmental fiscal relations, including optimal size for jurisdictions and assignment of public sector functions, the formulation and execution of tax policy in an intergovernmental setting, and the appropriate structure and use of intergovernmental transfers. In the second section, the core knowledge is applied to four major policy areas: education, welfare, fiscal interaction in urban areas, and economic development. In thinking about a new research agenda, the authors call for more current and authoritative estimates of fiscal incidence, including interjurisdictional spillovers, for more fundamental research about the federation process and effects of consolidation, for new evidence about the long run, general equilibrium effects of interjurisdictional competition, and for basic research about the choice process and establishment of intergovernmental fiscal institutions and policies by federal and subnational governments.

Rethinking Competitiveness Sep 01 2020 This volume is composed of nine prominent scholars' interpretations of and answers to the question: "If 'competitiveness' were to have a rigorous and relevant meaning in your field, what might that be?"

Technological Solutions for Sustainable Business Practice in Asia Jun 22 2022 Central Asian countries play a geostrategic role in world economy and politics. As a result, efforts are being made to establish an effective channel of communication between academic and research institutions, policymakers, government agencies, and individuals concerned with the

complexities of Asian business, information technologies, sustainable development, and globalization. *Technological Solutions for Sustainable Business Practice in Asia* provides an in-depth analysis on Asian economy, business, and management with a clear international and interdisciplinary approach. This comprehensive resource is beneficial for academics, PhD students, policymakers, and government officials.

Algorithms -- ESA 2011 Dec 04 2020 This book constitutes the refereed proceedings of the 19th Annual European Symposium on Algorithms, ESA 2011, held in Saarbrücken, Germany, in September 2011 in the context of the combined conference ALGO 2011. The 67 revised full papers presented were carefully reviewed and selected from 255 initial submissions: 55 out of 209 in track design and analysis and 12 out of 46 in track engineering and applications. The papers are organized in topical sections on approximation algorithms, computational geometry, game theory, graph algorithms, stable matchings and auctions, optimization, online algorithms, exponential-time algorithms, parameterized algorithms, scheduling, data structures, graphs and games, distributed computing and networking, strings and sorting, as well as local search and set systems.

Public Economics and Public Choice Jul 31 2020 This book contains essays in honor of Charles B. Blankart on the occasion of his 65th birthday. The contributors include prominent scholars from the discipline of public finance and public choice. The essays include such topics as taxation, public choice, and regulation, and thus give testimony of Blankart's very broad ranging interests in economics.

Perspectives on Commercializing Innovation Nov 03 2020 Intellectual property is a vital part of the global economy, accounting for about half of the GDP in countries like the United States. Innovation, competition, economic growth and jobs can all be helped or hurt by different approaches to this key asset class, where seemingly slight changes in the rules of the game can have remarkable impact. This book brings together diverse perspectives from the fields of law, economics, business and political science to explore the ways varying approaches to intellectual property can positively and

negatively impact our economy and society. Employing approaches that are both theoretically rigorous and grounded in the real world, Perspectives on Commercializing Innovation is well suited for practising lawyers, managers, lawmakers and analysts, as well as academics conducting research or teaching in a range of courses in law schools, business schools and economics departments, at either the undergraduate or graduate level.

Public Finance and Public Policy in the New Century Nov 22 2019 Essays on the theory and practice of public finance and policy. The sixteen essays in this book were written to celebrate the ninetieth birthday of Richard Musgrave and to commemorate the tenth anniversary of CES, the Center for Economic Studies at the University of Munich. Musgrave is considered to be a founding father of modern public economics. He belongs to the intellectual tradition that views government as an instrument that can be used to correct market failure and to establish the society that people want. Although his work fits within the individualistic framework of modern economics, he also draws on principles of moral philosophy. The essays take stock of and extend the theory and practice of public finance and public policy. They address the evolving role of government and the welfare state, the interaction between taxation and markets, the future of pension and health care systems, and international tax issues and fiscal federalism.

Flows with path restrictions Jan 17 2022 Pages:1 to 25 -- Pages:26 to 50 -- Pages:51 to 75 -- Pages:76 to 100 -- Pages:101 to 109

Contemporary Perspectives in Data Mining, Volume 1 Jun 10 2021 The series, Contemporary Perspectives on Data Mining, is composed of blind refereed scholarly research methods and applications of data mining. This series will be targeted both at the academic community, as well as the business practitioner. Data mining seeks to discover knowledge from vast amounts of data with the use of statistical and mathematical techniques. The knowledge is extracted form this data by examining the patterns of the data, whether they be associations of groups or things, predictions, sequential relationships between time

order events or natural groups. Data mining applications are seen in finance (banking, brokerage, insurance), marketing (customer relationships, retailing, logistics, travel), as well as in manufacturing, health care, fraud detection, home-land security, and law enforcement.

Machine Learning Using TensorFlow Cookbook Apr 27 2020 Comprehensive recipes to give you valuable insights on Transformers, Reinforcement Learning, and more Key Features Deep Learning solutions from Kaggle Masters and Google Developer Experts Get to grips with the fundamentals including variables, matrices, and data sources Learn advanced techniques to make your algorithms faster and more accurate Book Description The independent recipes in Machine Learning Using TensorFlow Cookbook will teach you how to perform complex data computations and gain valuable insights into your data. Dive into recipes on training models, model evaluation, sentiment analysis, regression analysis, artificial neural networks, and deep learning - each using Google's machine learning library, TensorFlow. This cookbook covers the fundamentals of the TensorFlow library, including variables, matrices, and various data sources. You'll discover real-world implementations of Keras and TensorFlow and learn how to use estimators to train linear models and boosted trees, both for classification and regression. Explore the practical applications of a variety of deep learning architectures, such as recurrent neural networks and Transformers, and see how they can be used to solve computer vision and natural language processing (NLP) problems. With the help of this book, you will be proficient in using TensorFlow, understand deep learning from the basics, and be able to implement machine learning algorithms in real-world scenarios. What you will learn Take TensorFlow into production Implement and fine-tune Transformer models for various NLP tasks Apply reinforcement learning algorithms using the TF-Agents framework Understand linear regression techniques and use Estimators to train linear models Execute neural networks and improve predictions on tabular data Master convolutional neural networks and recurrent neural networks through practical recipes Who this book is for If you are a data scientist or a machine learning

engineer, and you want to skip detailed theoretical explanations in favor of building production-ready machine learning models using TensorFlow, this book is for you. Basic familiarity with Python, linear algebra, statistics, and machine learning is necessary to make the most out of this book.

Mikroökonomie Dec 28 2022

Professional Services in the EU Internal Market Aug 24 2022
Professional services are a key component of the EU internal market economy yet also significantly challenge the legal framework governing this internal market. Indeed, specific professional regulatory structures, which are often the result of a blend of government and self-regulation, hold clear potential for conflict with EU free movement and competition law rules. Hence this book looks at the manner in which both free movement and competition laws might apply to such self- and co-regulatory set-ups, and at the leeway given to quality considerations (apparently) conflicting with free movement or competition objectives. In addition, since court action will seldom suffice to genuinely integrate a market, the book also explores those instruments of EU secondary legislation that are likely to impact the most on the provision of professional services. However, the book goes beyond a mere inventory to ask how EU Internal Market policy could contribute to the optimal legal environment for professional services. A law and economics analysis is employed to investigate the need for specific professional rules, the preferred type of regulator (self-, co- or government regulation), and the level - national and/or European - at which regulation should be adopted. As becomes clear, the story of the market for professional services is one of market and government failure; the author is thus left to compare imperfect situations where market failures compete with rent-seeking efforts, the tendency towards over-centralisation and national protectionism. This book offers both an in-depth legal analysis of the EU framework as it applies to professional services as well as a more normative evaluation of this framework based on insights from law and economics scholarship. It will therefore be a valuable resource for all practitioners, policy-makers and academics dealing with professional services, as well as, more generally, with questions

of quality and self-regulation.

The Hastings Law Journal Mar 27 2020

Democratic Federalism Sep 13 2021 An authoritative guide to federal democracy from two respected experts in the field
Around the world, federalism has emerged as the system of choice for nascent republics and established nations alike. In this book, leading scholars and governmental advisers Robert Inman and Daniel Rubinfeld consider the most promising forms of federal governance and the most effective path to enacting federal policies. The result is an essential guide to federalism, its principles, its applications, and its potential to enhance democratic governance. Drawing on the latest work from economics, political science, and law, Inman and Rubinfeld assess different models of federalism and their relative abilities to promote economic efficiency, encourage the participation of citizens, and protect individual liberties. Under the right conditions, the authors argue, a federal democracy—including a national legislature with locally elected representatives—can best achieve these goals. Because a stable union between the national and local governments is key, Inman and Rubinfeld also propose an innovative method for evaluating new federal laws and their possible impact on state and local governments. Finally, to show what the adoption of federalism can mean for citizens, the authors discuss the evolution of governance in the European Union and South Africa’s transition from apartheid to a multiracial democracy. Interdisciplinary in approach, Democratic Federalism brims with applicable policy ideas and comparative case studies of global significance. This book is indispensable for understanding the importance of federal forms of government—both in recent history and, crucially, for future democracies.

Efficient Approximation and Online Algorithms Oct 14 2021

This book provides a good opportunity for computer science practitioners and researchers to get in sync with current state-of-the-art and future trends in the field of combinatorial optimization and online algorithms. Recent advances in this area are presented focusing on the design of efficient approximation and on-line algorithms. One central idea in the book is to use a linear program relaxation of the problem,

randomization and rounding techniques.

A Macroeconomics Model and Stabilisation Policies for the OPEC Countries Dec 16 2021 First published in 1999, this book focuses on the macroeconomics issues which directly affect OPEC countries, aiming to set them in the context of the overall development effort. The most extant theoretical and empirical aspects in macroeconomics are integrated smoothly with institutional issues and policy questions. The analysis is illustrated through examples to show how the theories relate to the real world, especially to ongoing debates on developing economies as well as debates that encompass both developing and OPEC and developed countries.

Beiträge zur ökonomischen Theorie im Öffentlichen Recht Jun 29 2020 Dieser Band präsentiert Aufsätze, die exemplarisch Anknüpfungspunkte zwischen der ökonomischen Theorie des Rechts und der Rechtswissenschaft im Öffentlichen Recht aufgreifen. Die Autoren behandeln Themen aus dem Internationalen Völkerrecht, dem Europarecht und dem Steuerrecht sowie methodische Probleme, z.B. rationales Abwägen, Kosten-Nutzen-Analyse und Konsensökonomik.

Taking Property and Just Compensation Nov 15 2021 While much has been gained from the traditional legal scholars' doctrinal mode of analysis of the takings issue, this volume is presented in the belief that contributions from scholars from the various schools of thought that comprise Law and Economics can complement the traditional doctrinal approach to law. As the discipline of Law and Economics continues to advance, it remains heterodox; there are several vantage points from which to describe and analyze the interrelationships between law and economics. It is hoped that the analyses from the several vantage points provided here will complement the prodigious body of existing doctrinal, legal analysis of the takings issue and deepen the understanding of the jurisprudential questions and economic issues surrounding the takings issue. To this end, each contributor to this volume was selected as 'representative' of one of the schools of thought comprising Law and Economics. In addition, each contributor was provided with a collection of recent United States Supreme Court cases (those summarized in Chapter 1 of this book) along

with President Reagan's Executive Order: The sole charge to each contributor was to conduct a legal-economic analysis of the cases and the President's Executive Order from the vantage point of their respective school of thought.

Cost-Benefit Analysis of Multi-level Government Oct 22 2019

This book provides an original framework to assess public investment policies co-financed by Union (Federal) governments. This framework is applied to two important case studies: the EU Cohesion Policy and the US Federal Investment Policies. Cost-Benefit Analysis of Multi-Level Government sheds light on a number of outstanding issues of economic theory by extending the theory of shadow prices, and provides guidance to real-world decision makers. In particular, the following questions are addressed: Under which theoretical circumstances, higher level government intervention in Member States through investment policies is justified? Is there any new welfare economics rationale underpinning interregional equity? What is the relationship between interregional and interpersonal income distribution? How can social exclusion be included in cost-benefit tests? How can higher level government budget funds to investment policies before it bargains programming documents with lower tiers of government by considering also their response function? In these circumstances, how can optimal matching rates be derived assuming binding and non binding budgetary constraints? Can such a theoretical framework be applied for guidance to real-world decision makers? The book will be of interest to policy makers, postgraduate students and researchers in cost-benefit analysis, welfare economics, public choice, public finance, multi-level government economics, and income distribution issues.

Study Guide, Microeconomics Oct 02 2020

Algorithms -- ESA 2004 Aug 12 2021 This book constitutes the refereed proceedings of the 12th Annual European Symposium on Algorithms, ESA 2004, held in Bergen, Norway, in September 2004. The 70 revised full papers presented were carefully reviewed from 208 submissions. The scope of the papers spans the entire range of algorithmics from design and

mathematical issues to real-world applications in various fields, and engineering and analysis of algorithms.

Konsequenzen wirtschaftsrechtlicher Normen Oct 26 2022 Der Band behandelt aktuelle Rechtsfragen und Grundlagenprobleme, vor allem aus den Bereichen Bank- und Kreditrecht und Verbraucherschutzrecht.

Advances in Cryptology -- CRYPTO 2015 Feb 18 2022 The two volume-set, LNCS 9215 and LNCS 9216, constitutes the refereed proceedings of the 35th Annual International Cryptology Conference, CRYPTO 2015, held in Santa Barbara, CA, USA, in August 2015. The 74 revised full papers presented were carefully reviewed and selected from 266 submissions. The papers are organized in the following topical sections: lattice-based cryptography; cryptanalytic insights; modes and constructions; multilinear maps and IO; pseudorandomness; block cipher cryptanalysis; integrity; assumptions; hash functions and stream cipher cryptanalysis; implementations; multiparty computation; zero-knowledge; theory; signatures; non-signaling and information-theoretic crypto; attribute-based encryption; new primitives; and fully homomorphic/functional encryption.

Regulation in Israel Dec 24 2019 This book examines de facto regulation frameworks and methods in a variety of areas, such as banking, transportation, cyberspace, the non-profit sector, and more. Authored by experts in the field, this book deals with the “big” questions about the idea of regulation. It reveals the tentativeness of current regulatory schemes, the difficulties in balancing between the shared objective of protecting the public interest and other interests such as market stability, and promoting competition. The case studies point to the need for better planning and for more coherent policies. This collection offers to students of public policy, management and law, policy makers and practitioners a broad spectrum of insights—theoretical and practical—and contributes to the ongoing deliberations on the ways that regulatory arrangements could serve the public interest more efficiently.

Routledge Library Editions: Transport Economics Feb 06 2021 This set of previously out-of-print titles is an essential reference collection on the topic of transport economics.

Providing in-depth analysis on a variety of aspects, including the economics of the airfreight, shipping and rail industries, it also examines the economics of road transport and more focused areas such as containerisation.

samumsf.org
