Philosophies of Education from the Standpoint of the Philosophy of Experimentalism Aug 22 2019

Sustainable Development Goals Aug 14 2021 Building on the previously established Millennium Development Goals, which ran from 2000–2015, the 2015 Sustainable Development Goals (SDGs) provide the UN with a roadmap for development until 2030. This topical book explores the associated legal and normative implications of these SDGs, which in themselves are not legally binding.

Theory and Best Practices in Science Communication Training Jan 07 2021 This edited volume reports on the growing body of research in science communication training and identifies best practices for communication training programs around the world. *Theory and Best Practices in Science Communication Training* provides a critical overview of this emerging field. It analyzes the role of communication training in supporting scientists' communication and engagement goals, including their motivations to engage in training, the design of training programs, methods for evaluation, and frameworks to support the role of communication training in helping scientists reach their goals. Overall, this collection reflects on the growth of the field and provides direction for developing future researcher–practitioner collaborations. With contributions from researchers and practitioners from around the world, this book will be of great interest to students, scholars and professionals within this emerging field.

Mathematical Theory of Economic Behavior Nov 17 2021 A mathematical exposition of the basic theories of the economic behavior of individual decision makers, and extensions of these theories to the workings of markets and general equilibrium system.

Perpetrators and Accessories in International Criminal Law Dec 26 2019 International criminal law lacks a coherent account of individual responsibility. This failure is due to the inability of international tribunals to capture the distinctive nature of individual responsibility for crimes that are collective by their very nature. Specifically, they have misunderstood the

nature of the collective action or framework that makes these crimes possible, and for which liability may be attributed to intellectual authors, policy makers and leaders. In this book, the author draws on insights from comparative law and methodology to propose doctrines of perpetration and secondary responsibility that reflect the role and function of high-level participants in mass atrocity, while simultaneously situating them within the political and social climate which renders these crimes possible. This new doctrine is developed through a novel approach which combines and restructures divergent theoretical perspectives on attribution of responsibility in English and German domestic criminal law, as major representatives of the common law and civil law systems. At the same time, it analyses existing theories of responsibility in international criminal law and assesses whether there is any justification for their retention by international criminal tribunals.

Multi-Objective Optimization in Computational Intelligence: Theory and Practice Sep 27 2022 Multi-objective optimization (MO) is a fast-developing field in computational intelligence research. Giving decision makers more options to choose from using some post-analysis preference information, there are a number of competitive MO techniques with an increasingly large number of MO real-world applications. *Multi-Objective Optimization in Computational Intelligence: Theory and Practice* explores the theoretical, as well as empirical, performance of MOs on a wide range of optimization issues including combinatorial, real-valued, dynamic, and noisy problems. This book provides scholars, academics, and practitioners with a fundamental, comprehensive collection of research on multi-objective optimization techniques, applications, and practices.

Objective Measurement Oct 28 2022

The Theory and Practice of Recognition Sep 03 2020 This volume presents new essays on the theory and practice of recognition. In order to retain its overall plausibility as a critical social theory, contemporary recognition theory needs to be able to successfully combine theory with real-life perspectives, in both contemporary and historical contexts. Contemporary recognition theory has developed into an established and active multidisciplinary research programme. The chapters in this volume have two main purposes. First, they engage in theoretical development of the contemporary theories of recognition. They

explore the conceptual histories and the environments of recognition, as well as the connection between recognition and authenticity, emancipation, and social ontology. Second, they connect the theoretical insights of contemporary recognition with analyses of contemporary and historical social practices. These contributions explore themes such as populism and polarization, models of harmful invisibilization and social ignorance, the problem of evil and suffering, and social justice phenomena such as the #MeToo movement. *The Theory and Practice of Recognition* will be of interest to scholars and advanced students working in social and political philosophy, social ontology, political theory, and sociology.

The Corporate Objective Jun 24 2022 'This is legal scholarship of the finest kind, concerned with an issue of supreme political, economic and social importance. Professor Keay takes the debate on the object of the modern public corporation by the scruff of its neck and skilfully navigates between the Scylla and Charybdis of the shareholder/stakeholder debate. This book, characterised by admirable analytical clarity and a huge amount of research, faithfully summarises the debate hitherto, and propels us to the next stage with a powerful argument, which challenges, effectively, both the stakeholder and shareholder theories.' - Harry Rajak, University of Sussex School of Law, UK

Multiple Objective Control Synthesis Mar 09 2021 This book develops the necessary mathematical background and basic results in control theory that are needed to set up and solve a class of multiple objective control design problems. Exact solutions for certain problems are provided, as well as approximations to more general problems. This book is intended for engineering and mathematics graduate students who are interested in control theory and the application of functional analysis and optimization tools to engineering problems.

Branching Space-Times Sep 15 2021 "This book develops a rigorous theory of indeterminism as a local and modal concept. Its crucial insight is that our world contains events or processes with alternative, really possible outcomes. The theory aims at clarifying what this assumption involves, and it does it in two ways. First, it provides a mathematically rigorous framework for local and modal indeterminism. Second, we support that theory by spelling out the philosophically relevant consequences of this formulation and by showing its fruitful applications in metaphysics. To this end, we offer a formal

analysis of modal correlations and of causation, which is applicable in indeterministic and non-local contexts as well. We also propose a rigorous theory of objective single-case probabilities, intended to represent degrees of possibility. In a third step, we link our theory to current physics, investigating how local and modal indeterminism relates to issues in the foundations of physics, in particular, quantum non-locality and spatio-temporal relativity. The book also ventures into the philosophy of time, showing how the theory's resources can be used to explicate the dynamic concept of the past, present, and future based on local indeterminism"--

International Relations Today: Concepts and Applications Jan 27 2020 Meant primarily for students studying international relations, aspirants of civil services, International Relations Today: Concepts And Applications
