Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in-depth reviews. Eschewing the usual mathematical explanations for physics phenomena, this approachable reference explains complicated scientific concepts in plain English that everyone can understand. Tackling the big issues such as gravity, magnetism, sound, and what really happens in the Large Hadron Collider, this engaging look at physics also spells out why cats always land on their feet, why people appear to have red eyes in photographs, and the real danger of looking at an eclipse. For everyone who ever wondered how a light bulb works or how squirrels avoid electrocution on the power lines, this handbook supplies answers on the physics of everyday life and examines the developments in the exploration of subatomic particles. In addition to the question-and-answer section, an addendum of facts about physicists explains what the Nobel prize is and who has won it, and tells the story of the scientist who was incarcerated for agreeing with Copernicus. Answers more than eight hundred questions about physics, ranging from everyday life applications to the latest explorations in the field. A known-to-unknown approach has been followed in developing the concepts using the experimental method. The new HOTS (Higher Order Thinking Skills) questions section will greatly enhance the development of independent thinking skills. My Virtual Library

A Classroom-Tested, Alternative Approach to Teaching Math for Liberal Arts Puzzles, Paradoxes, and Problem Solving: An Introduction to Mathematical Thinking uses puzzles and paradoxes to introduce basic principles of mathematical thought. The text is designed for students in liberal arts mathematics courses. Decision-making situations that progress from recreational problems to important contemporary applications develop the critical-thinking skills of non-science and non-technical majors. The logical underpinnings of this textbook were developed and refined throughout many years of classroom feedback and in response to commentary from presentations at national conferences. The text's five units focus on graphs, logic, probability, voting, and cryptography. The authors also cover related areas, such as operations research, game theory, number theory, combinatorics, statistics, and circuit design. The text uses a core set of common representations, strategies, and algorithms to analyze diverse games, puzzles, and applications. This unified treatment logically connects the topics with a recurring set of solution approaches. Requiring no mathematical prerequisites, this book helps students explore creative mathematical thinking and enhance their own critical-thinking skills. Students will acquire quantitative literacy and appreciation of mathematics through the text's unified approach and wide range of interesting applications. This in-depth research study discusses whether 3D TV will become a new trend in the consumers' living rooms or if it is just a hype that will fail to establish itself. The study contains both extensive market research as well as target group research among the American population. Both parts of the study deal with the market situation of 3D TVs within the United States in 2011, and an extensive analysis of both studies provides in-depth insight into a potential future of the 3D TV market in the coming years. In 2010 only 3% of US households had purchased a 3D TV. According to E. Rogers' book 'Diffusion of Innovation' whose theory is used as a guideline throughout the whole research paper, those 3% can be identified as belonging to the category of innovators. To incorporate other categories of the adopter categorization, the 3D TV technology has to face economic, sociological and technological challenges. Those challenges as well as the trends and developments influence the adoption of the technology. E. Rogers discusses these influencing characteristics in his work and groups them into five categories: relative advantage, compatibility, complexity, observability and trialability. Based on Rogers' book, this study determines in how far those characteristics favor or disfavor the adoption process of 3D TV and how current trends and developments within the 3D TV sector might improve this process. These conclusions are then used in a target group research in order to determine whether they are feasible and will lead to a higher adoption rate of the technology within the next 3 to 5 years. Consequently, this research paper can act as a guide for both TV manufacturers and TV content producers that invest or plan to invest into 3D TV. However, the main purpose of the study is to be the starting point for marketing managers of those companies that already have started investing in 3D technology. The research gives insight into how the adoption process can be improved The India Institute of Foreign Trade (IIFT) was set up by the Government of India as autonomous organization to help professionalise the country's foreign trade management and increase export by developing human resources that lead it to be one of the top destinations to pursue MBA in International Business. Microeconomics is the most engaging introductory economics resource available to students today. Using real businesses examples to show how managers use economics to make real decisions every day, the subject is made relevant and meaningful. Each chapter of the text opens with a case study featuring a real business or real business situation, refers to the study throughout the chapter, and concludes with An Inside Look—a news article format which illustrates how a key principle covered in the chapter relates to real business situations or was used by a real company to make a real business decision. Solved problems in every chapter motivate learners to confidently connect with the theory to solve economic problems and analyse current economic events.
